

Sub 1  
means for mounting a bulk supply roll having said strip of cleaning fabric wound around a shaft;

calendering means for reducing the thickness and increasing the length of said strip of cleaning fabric on said shaft;

solvent applying means for applying a low volatility, organic compound solvent which does not readily evaporate at ambient pressure and temperature to said strip of cleaning fabric;

means for forming a cleaning fabric supply roll, wherein the diameter of the cleaning fabric supply roll is not substantially increased when the calendering means reduces the thickness and increases the length of the strip of cleaning fabric on the shaft; and

an excess solvent removing means for obtaining a strip of cleaning fabric saturated to functional equilibrium with said solvent.

**REMARKS**

Reconsideration of this application, as amended, is respectfully requested. Claim 46 has been amended to more clearly state the claimed invention and does not introduce new matter.
